```
The present sequence is the full length MuTu endogenous cellular component, MN, cDNA clone, which was isolated from lymphocytic choriomeningitis virus (LCMV) infected HeLa cells. Persistent LCMV, the exogenous MuTu transmissible agent (MX), infection increases the expression level of the MN gene. MN is a putative oncogene, and can therefore be used in the development of prods. For the diagnosis and treatment of neoplastic (NP), or pre-NP diseases. NP diseases can be treated using DNA antisense to MN transcribed mRNA, anti-MN protein antibodies can be used for the diagnosis NP or pre-NP diseases and a vaccine contg. immunogenic amounts of the MN protein can be used to immunise a vertebrate against a NP disease associated with MN antigen expression. (Updated on 25-MAR-2003 to correct PR field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               MN gene, protein and nucleic acid fragments - used as primers and probes in the detection of MN antigens and antibodies, and in the treatment of (pre) neoplastic disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1522 BP; 297 A; 458 C; 453 G; 314 T; 0 U; 0 Other;

                                                                                                                밁
                                                                                                                                                                  밁
                                                                                                                                                                                     श
                                                                                                                                                                                                                                                                                                       The present invention describes a method of screening for CC preneoplastic/neoplastic disease. The method comprises: (1) determining CC whether abnormal MN gene expression is present in a vertebrate; and (2) CC if abnormal MN gene expression is determined to be present in the CC vertebrate, determining that the vertebrate has a significant risk of CC having preneoplastic/neoplastic disease. The MN gene is an oncogene and CC encodes an MN protein (also referred to as MN/CA IX isoenzyme). The MN protein is a tumour associated carbonic anhydrase isoenzyme. The method CC is used for detecting a wide variety of preneoplastic/neoplastic diseases of the vertebrate, preferably a human. The disease detected is mammary, CC bladder, renal, urinary tract, ovarian, uterine, cervical, endometrial, CC vaginal, vulval, prostate, liver, lung, skin, thyroid, pancreatic, CC vaginal, jejunal, ileal, gastric, pancreatic duct, liver duct, gastric ducosa, ganibladder epithelium, small intestinal mucosa, colorectal comucosa, pancreatic duct epithelium, small intestinal mucosa, colorectal comucosa, pancreatic duct epithelium or liver duct epithelium of the present encomplistication of the present
                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               닭
The invention relates to the inhibition of cell adhesion mediated by the MN oncoprotein (also known as the MN/CA IX isoenzyme or the MN/G250 protein). The MN protein is a tumour-associated adhesion molecule which comprises a proteoglycan-like (PG) domain (AAB03017) which contains the protein's binding site, and a carbonic anhydrase (CA) domain (AAB03018). Abnormal expression of the MN protein is associated with tumorigenicity. The invention encompasses molecules (e.g., proteins and peptides) which which specifically bind to a site on the MN protein and peptides) which also encompasses MN proteins or MN protein in a cell adhesion assay. It also encompasses MN proteins or MN protein fragments which can be added to the extracellular environment to prevent the adhesion of vertebrate cells to each other. The invention also relates to the identification of the binding site of the MN protein and to a method of identifying a site
                                                                                                                                                                                                         Example 1; Fig 1A-C; 154pp; English.

                                                                                        CC on an MN protein to which cells adhere, comprising testing a series of CC overlapping peptides from the protein in a cell adhesion assay. The CC invention encompasses a vector comprising an expression control sequence CC invention encompasses a vector comprising an expression control sequence CC invention encompasses a vector comprising at the variable domains of a CC MN-specific antibody, where the domains are separated by a flexible CC linker peptide (AAB03035) and the vector inhibits the growth of a CC vertebrate preneoplastic or neoplastic cell that abnormally expresses MN CC protein. The invention also encompasses a vector comprising a nucleic CC acid encoding a cytotoxic protein or peptide operatively linked to the MN CC gene promoter, which inhibits the growth of a vertebrate preneoplastic or neoplastic cell. Also claimed is a repressor complex that binds to the MN CC gene promoter (AAA52473). MN proteins and peptides, MN-binding proteins CC and peptides, and expression vectors encoding such proteins and peptides are useful for treating patients with preneoplastic or neoplastic disease (e.g., cancers) associated with or characterised by abnormal MN compression. The present sequence represents cDNA encoding the human MN

This invention relates to a novel monoclonal antibody identified as the My/CA IX specific antibody prepared in knockout mice (CA IX deficient calle). Specifically, this antibody is directed towards the MN gene, a cellular oncogene known alternatively as carbonic anhydrase 9, CA9 or CM/CA9, which encodes the MN protein that is also known as the MN/CA IX isoenzyme, carbonic anhydrase IX, CA IX or the MN/C250 protein. The present invention describes the generation of this monoclonal antibody, and immunoreactive fragments thereof, which are directed against non-liminodominant epitopes on the CA IX extracellular domain. As such, this immunodominant epitopes on the CA IX extracellular domain. As such, this antibody can be useful diagnostically as a marker for preneplastic/ neoplastic tumours, immunodetection methods and immunotargeting approaches. Accordingly, compositions exhibit cytostatic activity and are useful in the diagnostic, prognosis and treatment of various cancers including breast, bladder or lung cancer, in tumour therapy and in antitumour vaccination. This polynucleotide sequence is the human MN cDNA of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               δ
                                              This invention relates to a novel soluble form of the carbonic anhydrase IX (CA IX) (or MN) protein or CA IX polypeptide which is released from precancerous and/or cancerous cells of a vertebrate into a body fluid. The invention may be useful for the development of compounds with a cytostatic activity or a vaccine whilst the disclosed sequences may be used for gene therapy. The protein and method are useful for screening, diagnosing or prognosing diseases associated with abnormal expression of carbonic anhydrase IX protein, such as precancerous and cancerous diseases like renal cell carcinoma, breast cancer or colorectal cancer. The monoclonal antibody may also be used for treating or preventing precancerous and cancerous diseases. The present sequence is that of the gene which encodes the human MN protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New soluble form of the carbonic anhydrase IX (CA IX) protein for screening, diagnosing or prognosing diseases associated with abnormal expression of CA IX protein, e.g. renal cell carcinoma, breast cancer or colorectal cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (FARB )

The present invention describes a method (MI) for screening for an anti-
CC neoplastic agent. The method involves exposing calls to a chemical agent
CC to be tested for anti-neoplastic activity, determining a change in
CC expression of at least one gene (I) of a signature gene set, where (I)
CC comprises a sequence (S) selected from 8447 sequences (given in ABL61664
CC to ABL70110), or is at least 95% identical to (S), where a change in
CC expression is indicative of anti-neoplastic activity. (I) has cytostatic
CC activity and can be used in gene therapy. MI can be used for screening an
CC enti-neoplastic agent, and can be used for producing a product which is
CC the data collected with respect to the anti-neoplastic agent as a result
CC of MI, and the data is sufficient to convey the chemical structure and/or
CC properties of the agent. MI can be used in the treatment of cancer such
CC as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney,
CC cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
CC cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
                                                                                                                                                                                                               Query Match

                                                        문
                                                                                 र्
                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes a method (M1) for screening for an anti-
cc explastic agent. The method involves exposing cells to a chemical agent
to be tested for anti-neoplastic activity, determining a change in
cc expression of at least one gene (I) of a signature gene set, where (I)
cc expression is indicative of anti-neoplastic activity. (I) has cytostatic
cc expression is indicative of anti-neoplastic activity. (I) has cytostatic
cc activity and can be used in gene therapy. M1 can be used for screening an
anti-neoplastic agent, and can be used for producing a product which is
cc anti-neoplastic agent, and can be used for producing a product which is
cc anti-neoplastic agent, and can be used for producing a product which is
cc anti-neoplastic agent. It can be used for producing a product which is
cc anti-neoplastic agent as a result
cc of M1, and the data is sufficient to convey the chemical structure and/or
cc properties of the agent. M1 can be used in the treatment of cancer such
cc as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney,
cc prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell
cc cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
ccell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's
                                                                                                                                                                                                                                                                                                                                                                Matches 1522;

The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (given in ABL61664 to ABL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. M1 can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of M1, and the data is sufficient to convey the chemical structure and/or properties of the agent. M1 can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, oseophageal, ovarian, kidney, carcinoma, clear cell; cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous cancer, and many carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          agent to be in expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 2002-188264/24.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (AVAL-) AVALON PHARM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          reening for anti-neoplastic agent involves exposing cells to a chemical ent to be tested for anti-neoplastic activity, and determining a change expression of a gene of a signature gene set.

The present invention describes a method (M1) for screening for an anti-
CC neoplastic agent. The method involves exposing cells to a chemical agent
CC to be tested for anti-neoplastic activity, determining a change in
CC expression of at least one gene (I) of a signature gene set, where (I)
CC comprises a sequence (S) selected from 8447 sequences (given in ABL61664
CC to ABL70110), or is at least 95% identical to (S), where a change in
CC expression is indicative of anti-neoplastic activity. (I) has cytostatic
CC activity and can be used in gene therapy. M1 can be used for screening an
CC anti-neoplastic agent, and can be used for producing a product which is
CC the data collected with respect to the anti-neoplastic agent as a result
CC of M1, and the data is sufficient to convey the chemical structure and/or
CC properties of the agent. M1 can be used in the treatment of cancer such
CC as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney,
CC prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell
CC cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's

                                                                                                                                                                                                                                                     밁
                                                                                                                                        ঠ
                                                                                                                                                                                                                                                                                               The invention relates to a method for detecting a lung cancer-associated transcript in a cell from a patient, comprising contacting a biological sample from the patient with a polynucleotide that selectively hybridises to a sequence that is at least 80 % identical to a gene that exhibits increased or decreased expression in lung cancer samples. Lung cancer-associated polynucleotides and polypeptides are used for identifying a compound that modulates a lung cancer-associated polypeptide, for inhibiting proliferation of a lung cancer-associated cell to treat lung cancer in a patient and for treating a mammal having lung cancer by administering a modulatory compound identified. The methods are useful for treating lung cancer, such as small cell lung cancer, non-small cell lung cancer or other benign or precancerous lesions, e.g. atelectasis, hypersens, bronchitis, chronic obstructive pulmonary disease, fibrosis, hypersensitivity pneumonitis, interstitial pulmonary disease, fibrosis, bypersensitivity pneumonitis, interstitial pulmonary disease, fibrosis, bypersensitivity pneumonitis, interstitial pulmonary disease, fibrosis, bypersensitivity pneumonitis, interstitial pulmonary disease, fibrosis, asthma and bronchitectasis. The genes, polynucleotides and polypeptides are useful compounds that modulate lung cancer, such as antibodies. Sequences and astagets for screening for therapeutic compounds that modulate lung cancer, such as antibodies.
                                                                                                                                                                                 Query Match

Detecting a lung cancer-associated transcript in a cell from for treating lung cancer, by contacting a biological sample is patient with a polynucleotide that exhibits increased or decreased or decreases in lung cancer. sample from t d or decreased a patient

Claim 22; Page 189; 453pp; English.

The invention relates to a method for detecting a lung cancer-associated transcript in a cell from a patient, comprising contacting a biological sample from the patient with a polynucleotide that selectively hybridises to a sequence that is at least 80 % identical to a gene that exhibite increased or decreased expression in lung cancer samples. Lung cancer-associated polynucleotides and polypeptides are used for identifying a compound that modulates a lung cancer-associated polypeptide, for inhibiting proliferation of a lung cancer-associated cell to treat lung cancer in a patient and for treating a mammal having lung cancer by administering a modulatory compound identified. The methods are useful for treating lung cancer, such as small cell lung cancer, non-small cell lung cancer or other benign or precancerous lesions, e.g. atelectasis, emphysema, bronchitis, chronic obstructive pulmonary disease, fibrosis,

The genes, polymucleotides and polypeptides are useful for diagnostic purposes and as targets for screening for therapeutic compounds that modulate lung cancer, such as antibodies. Sequences ABX76124-ABX76474 represent lung cancer-associated polymucleotides of the compounds that modulate lung cancer-associated polymucleotides of the compounds of the compounds that modulate lung cancer-associated polymucleotides of the compounds of the compounds that modulate lung cancer-associated polymucleotides of the compounds of the compo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 1552
